

## Chapters 2 - Homework Solutions

**2.1 (a)**  $P_{\text{ex}} = 30 \text{ kPa}$        $\Delta V = 3.3 \text{ L}$

$$w = -P_{\text{exp}}\Delta V = -(30 \text{ kPa})(3.3 \text{ L}) = -99 \text{ kPa}\cdot\text{L} = -99 \text{ J}$$

**(b)**  $n = 4.50 \text{ g} / 16 \text{ g/mol} = 0.281 \text{ mol}$        $T = 310 \text{ K}$   
 $V_1 = 12.7 \text{ L}$        $V_2 = 12.7 + 3.3 = 16.0 \text{ L}$

$$w = -nRT \ln\left(\frac{V_2}{V_1}\right) = -(0.281 \text{ mol})(8.314 \text{ J/mol}\cdot\text{K})(310 \text{ K}) \ln\left(\frac{16.0 \text{ L}}{12.7 \text{ L}}\right) = -167 \text{ J}$$

$$n_{\text{Mg}} = 12.5 \text{ g} / 24.3 \text{ g/mol} = 0.514 \text{ mol Mg}$$

$$n_{\text{H}_2} = 0.514 \text{ mol Mg} \cdot \frac{1 \text{ mol H}_2}{1 \text{ mol Mg}} = 0.514 \text{ mol H}_2$$

$$T = 20.2 \text{ }^\circ\text{C} = 293 \text{ K}$$

$V_{\text{Rct}} \approx 0$  [Because the volumes of solid Mg and aqueous HCl are negligible]

$V_{\text{Prod}} \approx V_{\text{H}_2}$  [Because the volume of aqueous MgCl<sub>2</sub> is negligible]

$$w = -P[V_{\text{Prod}} - V_{\text{Rct}}] \approx -PV_{\text{H}_2} = -n_{\text{H}_2}RT = -(0.514 \text{ mol})(8.314 \text{ J/mol}\cdot\text{K})(293 \text{ K}) \\ = -1250 \text{ J} = -1.25 \text{ kJ}$$

**2.3**  $n = 250 \text{ g} / 18 \text{ g/mol} = 13.9 \text{ mol}$        $C_{P,m} = 75.3 \text{ J/mol}\cdot\text{K}$        $\Delta T = 65 \text{ }^\circ\text{C} - 25 \text{ }^\circ\text{C} = 40 \text{ }^\circ\text{C} = 40 \text{ K}$

$$q = nC_{P,m}\Delta T = (13.9 \text{ mol})(75.3 \text{ J/mol}\cdot\text{K})(40 \text{ K}) = 41,900 \text{ J} = 41.9 \text{ kJ}$$

**2.4**  $q_P = 229 \text{ J}$        $n = 3.0 \text{ mol}$        $\Delta T = 2.55 \text{ K}$

$$q_P = nC_{P,m}\Delta T \rightarrow C_{P,m} = \frac{q_P}{n\Delta T} = \frac{229 \text{ J}}{(3.0 \text{ mol})(2.55 \text{ K})} = 29.9 \text{ J/mol}\cdot\text{K}$$

$$C_{V,m} = C_{P,m} - R = 29.9 - 8.3 = 21.6 \text{ J/mol}\cdot\text{K}$$

**2.5**  $C_{P,m} = 29.4 \text{ J/mol}\cdot\text{K}$     $n = 3.0 \text{ mol}$     $\Delta T = 285 \text{ K} - 260 \text{ K} = 25 \text{ K}$

$$\Delta H = nC_{P,m}\Delta T = (3.0 \text{ mol})(29.4 \text{ J/mol}\cdot\text{K})(25 \text{ K}) = 2205 \text{ J} = 2.2 \text{ kJ}$$

$$q = \Delta H = 2205 \text{ J} = 2.2 \text{ kJ} \text{ [since } P = \text{const.]}$$

$$\begin{aligned} \Delta U &= \Delta H - \Delta(PV) = \Delta H - \Delta(nRT) = \Delta H - nR\Delta T \\ &= 2205 \text{ J} - (3.0 \text{ mol})(8.314 \text{ J/mol}\cdot\text{K})(25 \text{ K}) = 2205 - 620 = 1585 \text{ J} = 1.6 \text{ kJ} \end{aligned}$$

An equivalent way to calculate  $\Delta U$  is to calculate  $C_{V,m} = C_{P,m} - R$  and then use  $\Delta U = nC_{V,m}\Delta T$ .

**2.6**  $n = m/M = 45 \text{ g} / 18 \text{ g/mol} = 2.50 \text{ mol}$     $C_{P,m} = 33.6 \text{ J/mol}\cdot\text{K}$     $q = 2800 \text{ J}$

$$q = n \cdot C_{P,m} \cdot \Delta T \rightarrow \Delta T = \frac{q}{n \cdot C_{P,m}} = \frac{2800 \text{ J}}{2.5 \text{ mol} \cdot 33.6 \text{ J/mol}\cdot\text{K}} = 33.3 \text{ K} = 33.3 \text{ }^\circ\text{C}$$

$$T_{\text{fin}} = T_{\text{init}} + \Delta T = 150 \text{ }^\circ\text{C} + 33.3 \text{ }^\circ\text{C} = 183.3 \text{ }^\circ\text{C}$$

**2.7**

(a)	$q < 0$	$w > 0$	$\Delta U < 0$	$\Delta H < 0$
(b)	$q > 0$	$w \approx 0$	$\Delta U > 0$	$\Delta H > 0$
(c)	$q < 0$	$w > 0$	$\Delta U = 0$	$\Delta H = 0$
(d)	$q = 0$	$w < 0$	$\Delta U < 0$	$\Delta H < 0$

**2.8** Since  $T = 323 \text{ K} = \text{constant}$ ,  $P_2V_2 = P_1V_1$  or  $V_2/V_1 = P_1/P_2 = 1 \text{ bar}/20 \text{ bar} = 0.05$   
 $n = m/M = 50 \text{ g}/32 \text{ g/mol} = 1.56$

$$w = -nRT \ln(V_2/V_1) = -nRT \ln(P_1/P_2) = -1.56 \text{ mol}(8.314 \text{ J/mol}\cdot\text{K})(323 \text{ K}) \ln(0.05) = +12,550 \text{ J} = 12.6 \text{ kJ}$$

$$\Delta U = nC_{V,m}\Delta T = 0 \quad \Delta H = nC_{P,m}\Delta T = 0 \quad q = \Delta U - w = -w = -12.6 \text{ kJ}$$

**2.9**  $n = 1.56 \text{ mol}$     $T = 323 \text{ K}$     $P_1 = 1 \text{ bar} = 100 \text{ kPa}$     $P_2 = 20 \text{ bar} = 2000 \text{ kPa}$

$$V_1 = \frac{nRT}{P_1} = \frac{1.56 \text{ mol}(8.314 \text{ kPa}\cdot\text{L/mol}\cdot\text{K})(323 \text{ K})}{100 \text{ kPa}} = 41.9 \text{ L} \quad \text{Similarly, } V_2 = 2.1 \text{ L}$$

$$w = -P(V_2 - V_1) = -2000 \text{ kPa}(2.1 \text{ L} - 41.9 \text{ L}) = +79,600 \text{ kPa}\cdot\text{L} = 79,600 \text{ J} = 79.6 \text{ kJ}$$

$$\Delta U = nC_{V,m}\Delta T = 0 \quad \Delta H = nC_{P,m}\Delta T = 0 \quad q = \Delta U - w = -w = -79.6 \text{ kJ}$$

**2.10**  $n = 1.56 \text{ mol}$     $P = 1 \text{ bar} = 100 \text{ kPa}$     $T_1 = 323 \text{ K}$     $T_2 = 473 \text{ K}$

$$C_{P,m} = C_{V,m} + R = 21.1 + 8.3 = 29.4 \text{ J/mol}\cdot\text{K}$$

$$\Delta U = nC_{V,m}\Delta T = 1.56 \text{ mol} \times 21.1 \text{ J/mol}\cdot\text{K} \times (473 \text{ K} - 323 \text{ K}) = 4940 \text{ J} = 4.94 \text{ kJ}$$

$$\Delta H = nC_{P,m}\Delta T = 1.56 \text{ mol} \times 29.4 \text{ J/mol}\cdot\text{K} \times (473 \text{ K} - 323 \text{ K}) = 6880 \text{ J} = 6.88 \text{ kJ}$$

Since  $P = \text{const}$ ,  $q = \Delta H = 6.88 \text{ kJ}$

$$w = \Delta U - q = 4.94 - 6.88 = -1.94 \text{ kJ}$$

(Alternatively, could evaluate  $V_1$  and  $V_2$  and use  $w = -P(V_2 - V_1)$ )

**2.11**  $T_1 = 323 \text{ K}$     $T_2 = 473 \text{ K}$

$$\Delta U = nC_{V,m}\Delta T = 1.56 \text{ mol} \times 21.1 \text{ J/mol}\cdot\text{K} \times (473 \text{ K} - 323 \text{ K}) = 4940 \text{ J} = 4.94 \text{ kJ}$$

$$\Delta H = nC_{P,m}\Delta T = 1.56 \text{ mol} \times 29.4 \text{ J/mol}\cdot\text{K} \times (473 \text{ K} - 323 \text{ K}) = 6880 \text{ J} = 6.88 \text{ kJ}$$

Since  $V = \text{const}$ ,  $q = \Delta U = 4.94 \text{ kJ}$    and    $w = 0$

**2.12**  $n = 1.56 \text{ mol}$     $P_1 = 1 \text{ bar} = 100 \text{ kPa}$     $V_1 = 42 \text{ L}$     $P_2 = 5 \text{ bar} = 500 \text{ kPa}$     $V_2 = 16 \text{ L}$

$$T_1 = \frac{P_1 V_1}{nR} = \frac{100 \text{ kPa} \cdot 42 \text{ L}}{1.56 \text{ mol} \cdot 8.314 \text{ kPa} \cdot \text{L} / \text{mol} \cdot \text{K}} = 324 \text{ K} \quad \text{Similarly, } T_2 = 617 \text{ K}$$

$$\Delta U = nC_{V,m}\Delta T = 1.56 \text{ mol} \times 21.1 \text{ J/mol}\cdot\text{K} \times (617 \text{ K} - 324 \text{ K}) = 9640 \text{ J} = 9.64 \text{ kJ}$$

$$\Delta H = nC_{P,m}\Delta T = 1.56 \text{ mol} \times 29.4 \text{ J/mol}\cdot\text{K} \times (617 \text{ K} - 324 \text{ K}) = 13,440 \text{ J} = 13.4 \text{ kJ}$$

Since process is adiabatic,  $q = 0$     $w = \Delta U - q = \Delta U = 9.64 \text{ kJ}$
